

## **Assignment 5**

**(23 Sep 2020)**

You need to create a RDS instance for a cloud application. Follow the steps below.

- Create an application for customer feedback management.
- When customers log in, they should be able to register a complaint. Store the customer complaint into RDBMS tables.
- When someone logs in from customer care service, they should be able to see the complaints registered.
- Create a Python program using boto that creates a the RDS instance with MariaDB/Mysql as database and the corresponding tables. Use a security group with appropriate port open.
- Open the public DNS of the newly launched instance in a browser and verify whether the application works.
